

Ergonomic harness with two attachment points, suitable for fall restraint systems and anti-fall systems where the operator has both feet on a surface which is horizontal or inclined at up to 30°.

Main features:

- chest attachment point in reinforced webbing, back attachment ring;
- innovative chest closure system with metal “Twist buckle” including anti-opening mechanism;
- adjustable padded shoulders, designed to avoid rubbing on the operator’s neck;
- two horizontal straps positioned on the shoulder straps and exclusively intended for the insertion of [HOOK REST](#) support;
- lumbar support made of breathable mesh for comfort if hanging;
- two additional tool-carrying loop;
- the leg loops are equipped with quick-release buckles that have an indicator for the correct insertion.
